
OUR CONTRIBUTION TO THE UN SUSTAINABLE DEVELOPMENT GOALS

Advancing a More Sustainable Future

Sustainable Performance.
Without Compromise.

Eight UN Sustainable Development Goals, delivered through mission-critical operations and the people who run them.

At AVAR, sustainability is more than a commitment. It is an integral part of how we operate, maintain and optimize mission-critical infrastructure.

Our sustainability approach supports the United Nations 2030 Agenda for Sustainable Development, translating global environmental and social priorities into practical, measurable operational improvements.

Through energy and water efficiency, carbon reduction, resilient infrastructure, responsible resource management, sustainable procurement and a fair, inclusive workplace, AVAR contributes to eight key Sustainable Development Goals (SDGs).

Our objective is to help clients reduce environmental impact, improve resource efficiency and build more sustainable infrastructure without compromising operational reliability or resilience.

EIGHT GOALS, ONE OPERATING MODEL

Our Alignment with the UN Sustainable Development Goals

SDG 5 · GENDER EQUALITY

Empowering Women. Advancing Equal Opportunities.

At AVAR, we are committed to fostering an inclusive workplace where equal opportunities, fairness, and respect are fundamental to our organizational culture.

Guided by our Human Rights and Code of Conduct policies, we promote merit-based employment practices, non-discrimination, and equal access to professional development, training, and career advancement.

We recognize the importance of empowering women across technical, operational, and corporate functions and supporting their participation in organizational decision-making and leadership opportunities.

Through responsible employment practices, workplace protections, and continuous improvement, AVAR strives to strengthen gender equality and create an environment where every employee has the opportunity to grow and contribute.

SDG 6 · CLEAN WATER AND
SANITATION

Optimizing Water Performance Through Intelligent Operations

AVAR supports responsible water management through advanced monitoring, cooling-system optimization, leak detection, intelligent controls and water reuse where technically feasible.

Our operational approach focuses on reducing Water Usage Effectiveness (WUE), minimizing water consumption and improving resource efficiency across mission-critical facilities.

By integrating water stewardship into facility operations, AVAR supports more resource-efficient infrastructure and strengthens resilience against water scarcity and supply challenges.

OUR ALIGNMENT WITH THE UN SDGS, CONTINUED

SDG 7 · AFFORDABLE AND CLEAN ENERGY

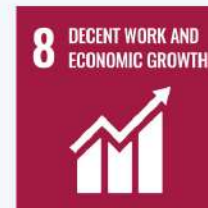

Advancing Energy Efficiency Across Critical Infrastructure

Energy efficiency is central to AVAR's operational sustainability strategy.

Through intelligent monitoring, cooling and power-system optimization, predictive maintenance, and energy performance management, we help clients reduce energy intensity, improve Power Usage Effectiveness (PUE), and enhance operational efficiency.

We also support clients' renewable-energy strategies and decarbonization initiatives, helping advance the transition toward more efficient and lower-carbon infrastructure.

By combining technical expertise with continuous innovation, AVAR contributes to responsible energy use while maintaining the reliability and performance of mission-critical operations.

SDG 8 · DECENT WORK AND ECONOMIC GROWTH

Empowering People. Building Careers. Driving Sustainable Growth.

At AVAR, our people are the driving force behind our success. We are committed to creating a safe, inclusive, and supportive workplace where employees are valued, empowered, and given opportunities to grow.

Through continuous learning, technical skills development, occupational health and safety programs, and employee well-being initiatives, we foster a culture of safety, professional excellence, and shared responsibility.

Guided by our commitment to human rights, fair employment practices, and employee engagement, we promote a workplace where every voice matters and every individual can thrive.

By investing in our people and nurturing talent, AVAR builds a stronger, more resilient workforce that drives operational excellence and sustainable growth.

SDG 9 · INDUSTRY, INNOVATION AND INFRASTRUCTURE

Building Resilient Infrastructure Through Operational Innovation

AVAR combines engineering expertise, advanced technologies and data-driven performance management to improve the sustainability, reliability and resilience of mission-critical infrastructure.

Our approach integrates predictive maintenance, intelligent monitoring, asset lifecycle optimization and efficient engineering practices to extend equipment life, reduce resource consumption and enhance operational performance.

Our approach brings sustainability and innovation together, enabling smarter infrastructure solutions that strengthen reliability, resilience, and long-term operational value.

SDG 12 · RESPONSIBLE CONSUMPTION AND PRODUCTION

Driving Circularity and Responsible Resource Management

AVAR integrates circular-economy principles across procurement, maintenance, waste management and asset lifecycle practices.

Our approach prioritizes sustainable sourcing, equipment durability, repairability, asset reuse, recycling, responsible e-waste management and supplier take-back programs.

We also support clients in progressing toward Zero Waste objectives, including a target of at least **90% waste diversion from landfill**.

Our commitment to circular resource management extends beyond waste reduction, emphasizing responsible consumption, extended asset life, and long-term environmental value.

OUR ALIGNMENT WITH THE UN SDGS, CONTINUED

SDG 13 · CLIMATE ACTION

Turning Climate Commitments Into Operational Performance

AVAR supports client decarbonization and climate-resilience objectives through energy optimization, emissions monitoring, renewable-energy integration and sustainable facility management.

Our approach incorporates climate considerations into operational planning, performance governance, infrastructure resilience and continual improvement programs.

By translating environmental commitments into measurable operational initiatives, we help clients reduce their carbon footprint and strengthen their ability to respond to evolving climate challenges.

SDG 17 · PARTNERSHIPS FOR THE GOALS

Collaborating to Deliver Sustainable Outcomes

AVAR recognizes that meaningful sustainability progress requires collaboration across the infrastructure value chain.

We work with clients, suppliers, technology providers and sustainability service partners to integrate responsible procurement, resource efficiency, waste recovery and environmental performance improvement into facility operations.

Through strategic collaboration and shared sustainability objectives, AVAR supports practical solutions that contribute to long-term environmental performance.

From Global Goals to Measurable Performance

AVAR translates sustainability principles into operational priorities through structured governance, technical expertise and continuous performance improvement. Our approach includes:

Energy Performance

Improving energy performance through efficient cooling and power systems, intelligent monitoring, and operational optimization.

Water Stewardship

Reducing water intensity through monitoring, optimization and reuse opportunities.

Carbon Reduction

Supporting emissions management, renewable-energy integration and decarbonization initiatives.

Circular Economy

Promoting waste prevention, recycling, responsible material recovery, sustainable procurement, and asset lifecycle optimization.

Sustainable Procurement

Integrating environmental considerations into sourcing, supplier selection and lifecycle decisions.

Infrastructure Resilience

Improving long-term efficiency, infrastructure reliability, operational innovation, climate adaptation, and sustainable asset management.

People & Well-being

Promoting employee health, safety, well-being, equal opportunities, professional development, and a respectful workplace culture.

Partnerships & Responsible Governance

Strengthening collaboration, responsible business practices, sustainability reporting, and continuous improvement across our operations and value chain.

Sustainable Performance. Without Compromise.

At AVAR, we believe that operational excellence and environmental responsibility go hand in hand.

Every resource conserved, every process improved, every employee empowered, and every partnership strengthened brings us closer to a more sustainable future.

Through innovation, responsible operations, and a shared commitment to continuous improvement, we help our clients turn sustainability ambitions into meaningful progress.
